IDENTITY '26 — AI USE DECLARATION

Project: Ajmer Stell Work Website

AI Tool	What We Asked It to Do	What We Wrote/Did Ourselves
ChatGPT	To understand HTML and CSS concepts, get guidance on website structure, improve styling, create product descriptions, and learn about animations and responsive design.	We implemented and customized the website in VS Code, organized product images, tested the pages, made design adjustments, and worked to understand the code used in the project.
Google Gemini	To help create and edit the video used on the website.	We selected the video, placed it on the home page, and adjusted how it appears on the website.
Meta AI	to enhance raw images and generate product photos for the website.	We selected and arranged the images on product pages and designed the website layout using HTML and CSS.

Declaration

"We confirm that this entry is our own work, that every AI tool used is listed above, and that we can explain every part of the submitted code."
